

Attention Bedford Business owners: Our Stormwater Program needs your help!

Your landscaping efforts affect the quality of our rivers and streams. If you use a professional landscape company, please let them know that you care!

- ❖ Grass clippings should not be left on pavement, where they can be washed into the nearest storm drain system, adding unwanted nutrients to waterways.
- ❖ Fertilizers and pesticides wash off lawn areas and pollute rivers and streams; use them sparingly and never before a predicted rain storm. Avoid over-watering, and keep in mind that organic, slow-release or phosphorus-free fertilizers are best!

Thank you for your cooperation!
